Publication No. US20060134663A1

GENERAL INFORMATION:

APPLICANT: Harkin, Paul

APPLICANT: Johnston, Patrick

APPLICANT: Willigan, Karl

TITLE OF INVENTION: Transcriptome Microarray Technology and

TITLE OF INVENTION: Methods of Using the Same

FILE REFERENCE: 55815-0102 (319189)

CURRENT APPLICATION NUMBER: US/11/266,748A

CURRENT FILING DATE: 2005-11-03

PRIOR APPLICATION NUMBER: EP 04105479.2

PRIOR FILING DATE: 2004-11-03

PRIOR APPLICATION NUMBER: EP 04105482.6

The availability of genetic sequences for NR4 permits the development of a range of agents capable of modulating the activity of IL-13 and related cytokines such as interleukin-4 for the treatment of allergy, asthma and other conditions relating to IgE. The genetic sequences can also be used in prodn. of recombinant NR4 or fusion proteins including NR4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        interleukin-13 - useful by IgE production.

The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, including lung disease and diseases whose secondary CC effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic cylingeded respiration, respiratory distress syndrome, pain, cystic cylingeded respiration, respiratory distress such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which activates adenosine voltent of the constant and prostate cancer. The reduction of the adenosine content of the constant and prostate cancer. The reduction of the AAA35312 represent the conclusion of the present the present the present content of the present in the discount of the present invention, which correspond to SEQ ID NO:1 to 185, but the sequences differ content the present invention on the match content of the present invention of the co

                                                                                                                   The invention relates to a novel pharmaceutical composition, which has a CC first active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5 or 3 end genomic flanking regions, CC 5, and 3 intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive, claimunosuppressive, and cytostatic activity. The composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting lévels CC for reducing sensitivity to adenosine, reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of ubiquinone or CC lung surfactant in a subject's tissue, or treating bronchoconstriction. CC Note: The sequence data for this patent is not represented in the printed CC specification, but was obtained in electronic format directly from WIPO at first wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     맑

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
CC composition of ligonucleotides, effective for alleviating
CC treation adenosine sensitivity, levels of adenosine (A) are respiratory
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (A) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystlc fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ds.
                                                                                                                                                                                                                                                                                                                                       Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                               This invention

reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    associated

cc may be used for early differential diagnosis, monitoring progression, cc assessing risk, assessing the likely response to treatment and for post concern diagnosis of systemic inflammatory response syndrome, sepsis and cc sepsis-like conditions. The recombinant or synthetic nucleic acid csequences of the invention, or derived proteins or peptides, may be cuseful as calibrants in assays for the specified diseases, for evaluating cuseful as calibrants in assays for the specified diseases, for evaluating cc divity or toxicity in screening for active agents and/or for cc diseases. The current sequence is that of a human SIRS/sepsis diagnostic comarker DNA fragment of the invention. Note: The sequence data for this custom at did not format directly from WIPO at ftp. wipo.int/pub/published cot sequences. Furthermore, a number of arbitrary SEQ ID NO.s are count during indexing due to inconsistencies in application and for format account during indexing due to inconsistencies in application and

New chemically synthesized double stranded siNA molecule that directs cleavage of an Interleukin-13 receptor (IL-13R) RNA via RNA interference, useful in preparing a composition for treating e.g., inflammatory

Page; 127pp; English.

The invention relates to chemically synthesized short interfering nucleic acids (siNAs) which downregulate expression of receptors for interleukin-CC acids (siNAs) which downregulate expression of receptors for interleukin-CC (siny). IL-13 receptor (IL-R) and IL-2 CC receptor gamma (IL-ER)) by RNA interference. The invention also relates to similar siNAs which interfere with the expression of the ligands for CC these receptors, namely IL-13 and IL-4. The siNAs of the invention may or these receptors, namely IL-13 and IL-4. The siNAs of the invention may or comprise ribonucleotides, can contain deoxyribonucleotides, can comprise sense and antisense regions, or alternatively are assembled from the chemically modified and may be double or single stranded. They further comprise sense and antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, CC micro-RNA (miRNA) and short hairpin RNA (siRNA), because of the invention also comprising an siNA targeted to micro-RNA (miRNA) and short hairpin RNA (siRNA), see RefSeq accession number CC magnetis to pharmaceutical compositions comprising an siNA targeted to modified. The invention further discloses expression vectors and the stransplant of the invention. The siNAs shown in CC magnetis and siNA of the invention. The siNAs exhibit concreased resistance to nuclease degradation compared to the prior art. The siNAs of the invention and the invention of their can be used to modulate expression of their can be siNAs exhibit and the siNAs of the inventions. They may be used in the createnent of cancers and other proliferative conditions, vital infection, can be used to modulate expression of their can be seases, conditions, vital infection, alternate to conditions, vital infection, the seases, can determine diseases, renal compared to obstructive pulmonary diseases, renal compared to standard diseases, renal compare endocrine diseases, prion diseases and reproduction-related condition. The siNAs may also be used in drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents a corresponding to human IL-13RA1 mRNA, which is specifically claimed a cDNA as a

δ

This sequence encodes human interleukin-13 (IL-13) alpha receptor. The invention relates to new purified peptides comprising 380 or 427 amino acid sequences, which are receptors for interleukin-13 (IL-13); the 380 and 427 am proteins are designated IL-13R beta and alpha respectively. The IL-13R beta has high affinity for IL-13 while IL-13R alpha has low affinity, but acquires high affinity when associated with the IL-4 receptor. Nucleic acids encoding IL-13R beta and alpha are used as diagnostic probes to identify aberrant synthesis or genetic anomalies such as loss of heterozygosity and rearrangements, or chromosomal anomalies. They are also used for production of recombinant IL-13R beta

Il-13 receptors are also useful as antisense molecules for gene therapy (blocking synthesis of IL-13R). Antibodies are used (in standard immunoassays) to diagnose diseases associated with abnormal expression of IL-13R receptors; when coupled to a toxin also for treatment of overproduction of IL-13R. Cells that express IL-13R at the surface are used to identify ligands and modulators of IL-13R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

CC Capable of binding human interleukin-13 (IL-13) and/or human interleukin-16 (IL-14) in the presence of IL-4 receptor alpha. To isolate the cDNA, PCR CC primers (see AAA88908-10) were designed from expressed sequence tags isolated from a database using mouse IL-13 receptor alpha. The primers CC were used to amplify human IL-13 receptor CDNA, from activated tonsilar B CC cell cDNA, The resulting cDNA fragment was used to screen a lambda gt10 CC library of activated tonsilar B cell cDNA and sequencing of the largest CC cDNA insert provided the present sequence. This IL-13 receptor alpha-1 CC cDNA insert provided the present sequence. This IL-13 receptor alpha-1 CC can be used to inhibit IL-13 or IL-4 induced IgE synthesis in B cells, useful in the treatment of diseases where IgE or Th2 differentiation CC plays a role, e.g. atopy, atopic dermatitis, allergy, thinitis, eczema, asthma or AIDS. Antibodies raised against the pulpaghtide are useful for detecting IL-13 and IL-4 receptor or parts of them which have been shed CC dermatitis, allergies, rhinitis, eczema, asthma, arby, atopic cerythematosus, thyroiditis, diabetes, uveitis, dermatitis, psoriasis, crown's disease, ulcerative colitis, Crohn's disease, Sjogren's syndrome and crown and collegative colitis, Crohn's disease, Sjogren's syndrome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention also relates to a method of treatment of a disease in which IL13 and IL4 cause adverse effects. The method is useful for treating a disease in which IL-13 and IL-4 cause adverse effects, e.g. atopy, atopic dermatitis, allergy, rhinitis, eczema, asthma or AIDS. The polypeptides of the invention are useful in raising antibodies. It is also useful in gene therapy. The present sequence is human interleukin-13 receptor alpha (IL-13 Ralpha) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-DEC-1996;
